```protobuf
message Request {
    int64 id = 1;
    int64 branch_id = 2;
}

service Shop {
    rpc GetProduct(Request) returns (Product) {
        option (google.api.http) = {
            get: "/product/{id}"
            additional_bindings: {
                get: "/branch/{branch_id}/product/{id}"
            }
        };
    }
}
```

```
rpc GetProduct(Request) returns (Product) {
    option (google.api.http) = {
        get: "/product/{id}"
        additional_bindings: [
            {
                get: "/branch/{b_id}/product/{id}"
            },
            {
                get: "/a/{a_id}/b/{b_id}/product/{id}"
            }
        ]
    };
}
```
